

THE IMAGE OF THE STUDENT'S WORLD AS A PHENOMENON OF INNOVATIVE EDUCATIONAL PRACTICE

The problem of the formation of the image of the world of a student of a general secondary education institution is relevant, because the image of the world integrates the interaction of a person with objective reality, it requires the development of the thinking of the subjects of the educational process in order to achieve a deeper understanding of reality. The applied aspect of solving the problem is determined by the need to synthesize interdisciplinary knowledge about the subject of research by means of methodological reflection for the innovative development of education.

In our opinion, one of the ways to solve the issue of the formation of a student as an individual, a patriot, an innovator in the conditions of the New Ukrainian School is to understand the image of the world as a whole entity, integrated in essence, which is a prerequisite and a result of his educational and cognitive activity. The need for the synthesis of interdisciplinary knowledge about the formation of the student's image of the world, in particular, the national one, is due to the understanding of the contextuality of knowledge within the limits of the determined subject of research in various fields of knowledge.

The purpose of the article. To theoretically substantiate the content and structure of the concept of "formation of the image of the student's world" as a phenomenon of innovative educational practice; to understand the applied aspect of solving the problem of forming the image of the student's world, in particular, the national image in the educational process of the New Ukrainian School.

By the concept of "formation of the student's image of the world" we understand the process of directed self-organization of the acquisition by the student, as a subject of learning / action, of a system of personally significant knowledge about the world and his place in it.

The structure of the concept is represented by the following components:

acmeological (a manifestation of the formation of the student's image of the world is the formation of his acmeological position as a conscious attitude to educational and cognitive activity, moral maturity);

axiological (a manifestation of the formation of the student's world image is the formation of a value-meaningful attitude to the activity, which represents his value orientations and personal meanings of learning / action);

ethical (a manifestation of the formation of the image of the world is the development of moral and ethical qualities of the student's personality, which represent the experience of "being yourself", civic activity, social responsibility);

cognitive (a manifestation of the formation of the student's image of the world is the formation of complete knowledge about the world and his place in it);

cultural (a manifestation of the formation of the image of the world is the reflexive self-realization of the student in the context of the ethnic picture of the world as a citizen and patriot of Ukraine).

The article reveals the applied aspect of the formation of the student's image of the world. In the educational process of the New Ukrainian School, the problem of the implementation of cross-cutting content lines is particularly relevant, which is due to the need for the integration of content and organizational forms of education. If we consider the raised problem in the aspect of the formation of the student's image of the world, then we are talking about the directed self-organization of the student as a subject of learning / an act for the purpose of generating cognitive hypotheses for understanding the image of the environment (Content line "Ecological safety and sustainable development"), the image of society and the state ("Civil responsibility"), the image of health ("Health and safety"), the image of an entrepreneur ("Entrepreneurship and financial literacy"), the formation of integral knowledge by means of prob-

lem-based learning, integration of content and organizational forms based on the subjective experience of students (complex socially significant extracurricular topics), which is consistent with the image of the world of the student, testing and modifying it holistically.

In order to develop a system of knowledge about the world and one's place in it, it is advisable to construct questioning situations ("What can I know?", "What can I hope for?", "What can I do?"), a dialogic structure of educational and cognitive students' activities, the use of the reflection method and the methodology "Philosophy for Children" (M. Lipman), which is recommended for use in general secondary education institutions. We consider philosophy in the educational process as one of the means that helps education fulfill its mission - to contribute to the formation of the student's personality as a patriot, an innovator.

The formation of a national image of the world involves the design and implementation by teachers of ethnological content in the educational process of the New Ukrainian School. The national component of the student's image of the world as a mental structure of self-identification, which ensures reflexive self-realization in the context of the ethnic picture of the world, should surpass the value-meaning construct of the formation of the student's personality. As a system of emotional and value values, which have meaning for the bearer of a certain ethnicity, it should ensure self-regulation and orientation of the cognitive hypotheses of the life-creating project of the individual.

National is one of the basic characteristics of students' image of the world, which represents its active and social nature. V. Andrushchenko writes: ""National" not only did not exhaust its constructive possibilities, but also did not even deploy them to their full extent and creative potential. I will take responsibility for the opinion that these possibilities are inexhaustible. They are the ones who should provide

cultural, moral and organizational warnings against the negative manifestations of globalization".
